## Ergonomic, versatile and with exceptional German quality: GRIP MARKER

The new GRIP MARKER range from Faber-Castell combines unique, ergonomic design with cost-effectiveness. It comprises four indispensable tools in easy-to-use magnum format, specially designed for different surfaces in the office or at home. All four models share the characteristic GRIP design, the ergonomic triangular shape with raised dot grip zone to maintain a secure hold and sustained comfort. This makes the pens easy to work with even for long periods.

Weatherproof, light-resistant and offering excellent adhesion, the **PERMANENT GRIP MARKER** is ideal for writing on surfaces such as glass, wood, card and metal. It can be fitted with a sturdy round or wedge tip for different line widths. The PERMANENT GRIP MARKER with smudge-proof and waterproof ink is available in red, blue, green and black.

The **FLIPCHART MARKER** is the ideal marker for professional presentations. The fast-drying water-based ink is smudge-proof, waterproof and light-resistant and will not seep through the paper. It is also available in red, blue, green and black.

If you want the option of correcting or erasing your notes, then the **WHITEBOARD MARKER** with sturdy round tip is perfect. The low-odour ink in red, blue, green and black can be easily wiped off a whiteboard surface without leaving any traces.

The translucent **TEXT MARKER** is designed for use on standard and special papers and comes in a range of brilliant colours. With its sturdy wedge tip, it is available in three different line widths for precision highlighting. There are four luminous shades: yellow, pink, orange and green.

All four GRIP MARKERS offer exceptional performance. When the ink runs out, simply insert the appropriate refill and the self-regulating capillary system will refill itself automatically. As well as being highly efficient, the GRIP MARKERS are therefore also kinder to the environment.
